Project Name	Dietary Analysis
Date	25/06/2025

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Technical Architecture:

```
┌─────────────────────────┐      ┌─────────────────────────┐      ┌─────────────────────────┐
│  Kaggle (Raw Dataset)   │─────▶│ Excel (Data Cleaning &  │─────▶│  Docs (Problem, KPIs)   │
│                         │      │         Prep)           │      │                         │
└─────────────────────────┘      └─────────────────────────┘      └─────────────────────────┘
